

# A helpful guide to designing for VOmax.\*

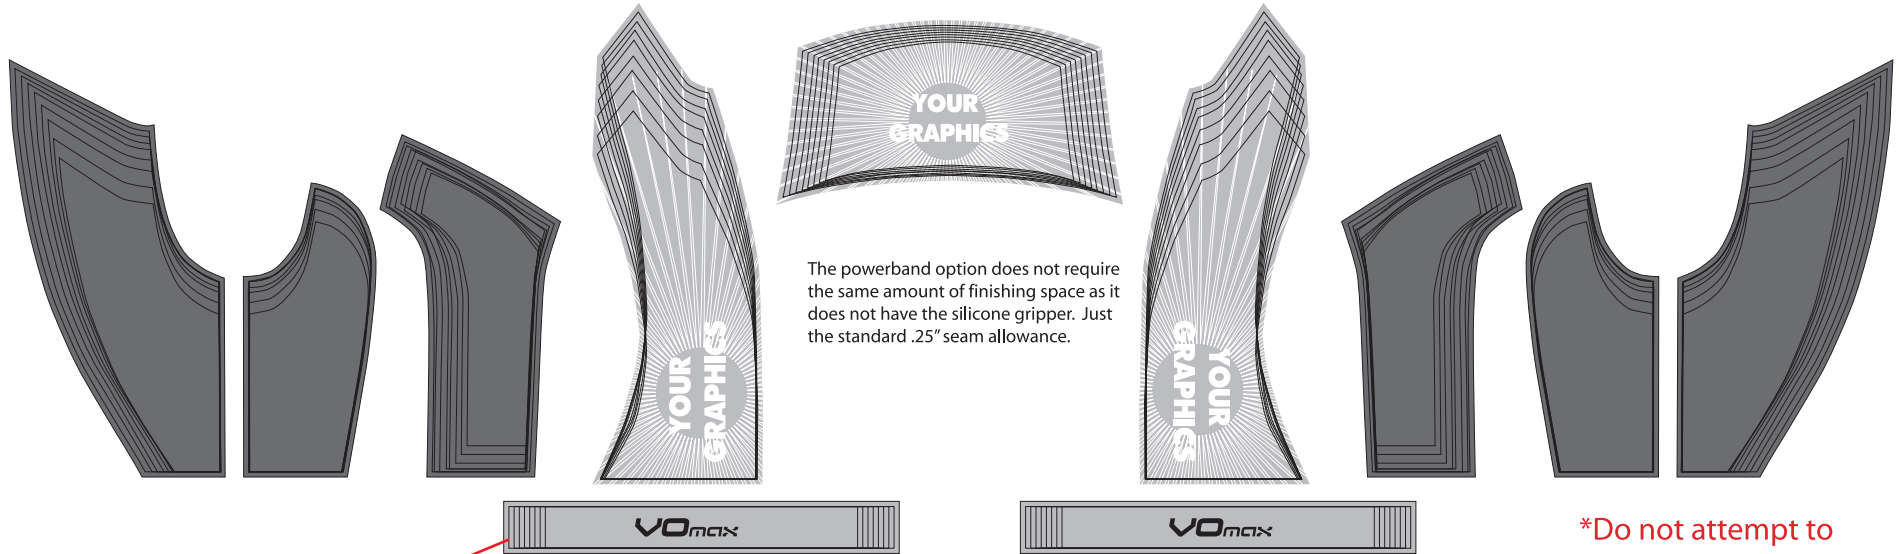

VOmax logos: We like to get at least two logos on all of our jerseys, we require a minimum of one location. Common locations are shown below.

Darker grey panel are typically pre-dyed black but can be sublimated for an additional cost.

The rear yoke requires finishing space at the top and bottom, Give about two inches at the top and about a half an inch at the bottom.

The bottom of the non bib shorts requires some space for finishing. Give about two inches of space up from the bottom to avoid having the internal silicone gripper and stitching go through important text and graphics.

The powerband option does not require the same amount of finishing space as it does not have the silicone gripper. Just the standard .25" seam allowance.

Sizes: We offer XS-4XL and we cut all sizes from one print so your important graphics should all fit within the smallest size ordered while the background extends out to the largest size ordered. We do not scale art for each size.

**\*SPECIFICS WILL VARY DEPENDING ON THE GARMENTS ORDERED.**

**\*Do not attempt to place graphics across seams from one panel to another. They will not line up.**
